

Zomato Restaurant Data Analysis

Prepared for: Alfido Tech

Submitted by: Pramit Deshwal

Date: Jul 10, 2026

Executive Summary

The objective of this project is to analyze the **Zomato restaurant dataset** for Bengaluru to extract actionable insights regarding customer preferences, location hotspots, and pricing strategies.

By performing comprehensive **Exploratory Data Analysis (EDA)** and data visualization, we have identified key trends that can help Alfido Tech optimize its platform, target the right partnerships, and improve user engagement. Through this analysis, we aim to bridge the gap between restaurant density and consumer demand by identifying high-value opportunities within the current market landscape.

Key Data Insights

Insight 1: Location Hotspots

The data reveals that BTM Layout and Koramangala have the highest concentration of restaurants. These areas represent highly saturated but lucrative markets with significant consumer traffic.

Top 10 Locations with the Most Restaurants

Insight 2: Cuisine Popularity

Our text analysis indicates that '**North Indian**' and '**Chinese**' are the most frequently offered and searched cuisines across the city, suggesting a strong baseline demand for these food types.

Insight 3: Rating vs. Price

The Box Plot analysis shows that 'Premium' and 'Luxury' segments consistently maintain higher ratings (**4.0+**). Furthermore, the heatmap confirms a **positive correlation** between the number of votes and the overall rating, indicating that higher engagement often leads to better-perceived quality.

Strategic Recommendations for Alfido Tech

Based on the data insights, the following five actionable recommendations are proposed for the Alfido Tech platform:

1. **Target High-Density Hubs for Initial Onboarding:** Focus the sales and partnership teams on **BTM Layout** and **Koramangala**. Given the high density of restaurants, onboarding these vendors will quickly scale the platform's base and provide maximum options to initial users.
2. **Capitalize on Top Cuisines:** Since '**North Indian**' and '**Chinese**' dominate the market, Alfido Tech should run **targeted app promotions**, push notifications, and "Food Festivals" centered around these cuisines to drive user acquisition.
3. **Launch a "Premium Verified" Category:** Restaurants costing over **₹1,000 for two people** consistently maintain higher ratings. Creating a "**Premium**" or "**Elite**" tag will cater to users looking for guaranteed quality and higher order values.
4. **Gamify the Review System:** The positive correlation between **customer votes and ratings** suggests that engagement drives visibility. Alfido Tech should incentivize users to leave reviews via **reward points** or **discounts** to build user trust.
5. **Curate a "Hidden Budget Gems" Collection:** The budget segment (**<₹500**) shows the highest variance in ratings. By curating a special list of **highly-rated budget restaurants**, the platform can attract the **student demographic** looking for affordable, quality food.
